**ABSTRACT**

The idea behind this project is to protect the leakage of question papers before the examination and also to maintain the security of the answer papers until they reach the centre for evaluation. An electronic box is made in which the exam papers will be placed, and can be opened only at the exact time of examination after the cross checking of the password. Updates are displayed in the box regarding the time left for the exam to finish.

Once the exam is completed, the answer papers are resealed inside the box and are removed out only during the time of correction, and thus preventing the answer papers being tampered. If anyone tries to open the box before the stipulated time, then a siren is blown and it is set in memory which can later be checked at the centre. Thus, the project works towards the protection of the examination papers and provides a fair competition through the exam.
