ABSTRACT

The fuel petrol bunks are fitted with so many deferent kind of automation technique like automatic dispensing, automatic billing, etc. Many times it is required that the fuel quantity has to be displayed in the manager room to know the status of the stock. Different methods are possible to detects the levels, the method what we are showing is the accurate method of detecting the levels of the fuel in every tank.

Petrol pumps in many parts of the country went dry and more are expected to run out of stock by today as a result of the strike by oil PSU officers, provoking the government to ask company managements to sack close to 70 executives leading the agitation. Nearly 30 per cent of petrol pumps in Delhi and about 100 in Mumbai went without petrol and diesel while there is a minimum seven-day wait period for delivery of domestic LPG gas.
