ABSTRACT

In this fast moving world most of the companies / Institutes require a service to maintain the proposals call and submissions with a very minimum cost and easy to use web applications.

Now a days the companies and institutes call for a proposal or invitations through a news paper advertisement and receives a set of proposals, process them and make the decisions. This is very time consuming and very costly.

In our project we are attempting to develop a web application which is simple, cost effective, user friendly and secured. We are achieving this by developing a web service which will be registering the companies as clients to upload their advertisement of proposals and to store the received proposals for their clients who will be registering to our service.

Electronic - P O BOX capabilities provide an accurate record of your work to help you identify revenue rich tasks so you can capitalize on them.
