ABSTRACT

Outcome Based Education (OBE) is an effort to improve and sharpen education of students. In this outlook, OBE is a means by which today's students can implement and apply what they have learned, putting it into practice in an increasingly complex and challenging environment. Assessment of technical aspects is based on outputs and final products while for soft skills on performance during the various sessions. In this Project, we intend to implement the functionalities of Outcome Based Education by measuring the performance by standards-based assessments at different levels such as Student level, Subject level, Programme (Course) level and finally at the College level.
