ABSTRACT

For money transaction the real account holder has to go ATM and if the real account holder is busy and he don't want to go ATM ,that time if he sends other person to withdraw the money by giving ATM card to that other person, he has to tell the password which gives rise to security problem.

With this ATM CODE ACCESSING, when the ATM card is inserted by any person a SMS will be send to the card holder, where the card holder is required to feed the password and amount to be withdrawn. So the password remains secured and confidential.
