ABSTRACT

Helmet as defined in the *Word Web* – “A protective headgear made of hard material to resist blows.” Helmets are used in places where there can be a possibility of head injury and is typically used in the Races, Industrial manufacturing plants, mining and various sports activities.

In day today life, it is just impossible to put into action, the laws by government to wear helmet while driving a vehicle and avoid driving when driver has consumed alcohol, in each and every area of country. The helmet suggested by us aims to overcoming such shortcoming and provide user with comfort, safety and security for bike.

As growth of 2-wheelers increases, the number of accidents increases and theft of 2-wheelers also increases. The helmet suggested by us acts as a second key for 2-wheelers. The system planned by us makes it mandatory for the rider to wear helmet before starting the vehicle and he shouldn't have consumed alcohol, and it also provide security to the vehicle.
