2010-2011

ABSTRACT

This project aims at helping the family to plan and organizes their money in a systematic way. By recording the expenditure of the family, it becomes a major help in book keeping. A previously existing system has been used as reference to develop this software.

With graphical user interface, it is more user-friendly. Multi-user function becomes add-on over existing system. The access protection given to each user increases the security. Along with the report generation function of the previous system, graphs and charts are included for the analysis. This enables to record the saving, based on income. On the whole, it is a system which provides a better method of analyzing the expenditure and income..

Additional access control is provided to the admin, where in he/she can monitor all other profiles. Budget Monitor will be very much useful for families to keep track of their expenses and also to compare between their expenses.
