ABSTRACT

Virtual college is a project which has found a new way e-learning. It's a new learning solution for many existing real world problems. In real world we face many kinds of difficulties to physically go to an institute because of the geographical constraints or physical disability etc. Virtual college is the solution to all of these problem. The idea of virtual reality faces humankind with a completely new phenomenon.

The purpose of our project is to implement virtual reality concept for college, which helps millions of students in pursuing their studies sitting at home and provides tremendous opportunity for every 'connected' person to find his/her field. This is done by preparing the virtual model of a college where student, lecturers and administrators can interact in real time.
