ABSTRACT

Education must provide the means and opportunities to enhance the child's creative expression and the capacity for aesthetic appreciation. The Government based on the conviction that the child's development is linked with social progress, have implemented several welfare schemes such as free midday meals, text books, uniforms, bicycles. These activities are managed by government education departments such as BEO, DDPI and ministry of education.

We proposed this project for the direct online communication between schools and government education departments. This project is implemented in a such a way that it removes the gap between schools and educational department, Government of Karanataka for fulfilling the requirements of schools. Using this project the school authorities like HM can send indents regarding mid-day meals, text books, uniforms, bicycles and government will fulfill the requirements of school. so that manual work will be completely removed. Apart from this HM of school can send the feedback regarding school problems such as water, electricity supply, construction problems immediately to higher authority departments so that problem can be resolved easily with in short period.
