ABSTRACT

Our application is a web browser for android. Along with the basic functionalities that a normal browser provides which are *retrieving, presenting and* traversing information resources on the World Wide Web, our application also provides integrated functionalities namely social networking and bandwidth counter.

The integrated social networking module allows user to post updates directly and fetches updates from the website. The application also features a Bandwidth counter which keeps track of bandwidth usage of the device and also allows user to set alerts on exceeding certain configurable limits.

Smart bookmarking feature allows user to sort the bookmarks based on various criteria, user can choose to sort bookmarks by usage, alphabetically or most recently added. The application also features tabbing feature which allows user to handle multiple WebPages on different views called tabs.
