ABSTRACT

In the present world of modern technology power plays an important role in every aspect of life in different forms such as electricity, wind and other forms. The objective of the project is to reduce man power in an industry and a prototype model has been designed.

The project aims to develop a prototype model of an industry with basic features such as an employee identification system, parking management system, communication device are the peripherals used in the system.

In this project we have attempted to device a prototype model equipped with basic features of an industry and some of our advancements in improvising it.
