ABSTRACT

The Cloud Player for Windows 8 allows us to dynamically take songs from cloud store and play them licensed. It helps fight propriety music piracy and at the same time enables user to listen to it much reduced price which will be decided later at the end of the project. The player supports .mp3, .wma, and .acc files in the background cloud. In the front, it is supported by following technologies:

- 1) .NET 4.5 for Windows 8 Desktop
- 2) .NET 4.0 for Windows 7
- 3) Metro UI 4.5 for Windows based tablets
- 4) Metro UI 4.0 for Windows Phones
- 5) Web based UI for all other OS
- 6) Mobile based UI for all other phone devices
