ABSTRACT

The introduction of Information and Communication Technologies (ICTs) are rapidly changing the way of public interact not only with each other but also with private businesses and government institutions. Information Technology improve effectiveness and efficiency, capacity to store and process large volumes of data, it also improve intelligence and investigative capabilities and make ready access to criminal records and other kinds of relevant data. ICT in policing make possible the collection, storage and rapid dissemination of information, it enhances public safety and reduces crime.

PQRS uses a distributed application structure, which contains a user application software on the user end and a web application on the other end which is for the emergency service providers.
