ABSTRACT

The system titled as “Cloud Based MANET Approach for Crime Prevention Strategy” is a Mobile based application. This system provides facility for reporting crimes, complaints, missing persons, show most wanted person details mailing as well as chatting. Any Number of clients can connect to the server. Each user first makes their login to sever to show their availability. The server can be any online Server. Server must be maintained for temporary storage of emails and chat jar files for enable the chatting facilities.

This system will be used for tracking latest crime inside a particular city and also officers will be alerted by using email service and/or sms service, which belongs to the nearest police station, files which can help police to recognize the existing criminal records in their database. The complaint has to be registered immediately and reply vice versa. The complaint action will process all authority.

Once a registered end user (supervisor) logs into the portal from a web browser. The user can either view the UI, which displays the real time information. The UI provides information such as, address, event type, attention type of each event, date and time of occurrence of the event.
