Prof. Raghuram K.M

Assistant Professor

Department of E&CE, SDMCET, Dharwad

2013-14

Abstract:

Electronics is an emerging and ever green field of Engineering. Also it is important to practice some of the Management & Entrepreneurship skills being an Engineer. In that direction, this project tends to improve and bring out some of the management skills, along with the fluent flow of electronics knowledge. Our main motto is to design, manufacture and market basic electronics devices. The device which we planned to manufacture is, a "wireless waiter calling bell". In wireless waiter calling bell, we use wireless transmitter and receiver modules to transmit data over a long range and ease the work of waiters and bring peace in the customers from long waiting times. This project is expected to give better results over electronics market and inculcate a well bound combination of electronics knowledge, marketing strategies and entrepreneur skills.
