

**"ISOLATION AND SCREENING OF CRUDE GLYCEROL UTILIZING
MICROORGANISMS FOR THE PRODUCTION OF 1,3-PROPANEDIOL"**

A Project Report

Submitted To

Karnataka State Council For Science and Technology

Sponsored by

Karnataka State Biofuel Development Board (KSBDB)

As a partial fulfillment of

Biofuel Project
(Under 37th Series of Student Project Program)

Submitted by

Miss.Renu Sharma

Mr.Manojkumar H

37S_B-MSc _014

Under the Guidance

Prof. G. R. Naik M.Sc, Ph.D

Vice Chancellor & Dean,

Faculty of Science and Technology,

Gulbarga University, Gulbarga

DEPARTMENT OF BIOTECHNOLOGY
GULBARGA UNIVERSITY,
GULBARGA - 585 106

2013 -2014

TABLE OF CONTENTS

CONTENTS	PAGE NO.
1. INTRODUCTION	1
1.1 1, 3-Propanediol	
1.2 Enzymes involved in 1, 3-PDO production	
1.3 Application of 1,3-PDO	
1.4 Future prospects and outlook	
1.5 Aims and Objectives of the present study	
2.REVIEWS OF LITERATURE	4
2.1 1,3-PDO producing microorganisms	
2.2 Glycerol	
3.MATERIALS AND METHODS	6
3.1 Chemicals	
3.2 Sample collection	
3.3 Enrichment of soil microorganisms	
3.4 Isolation of crude glycerol utilizing microorganisms from soil sample	
3.5 Screening of microbes for 1,3-PDO production	
3.6 characterization of 1,3-PDO producing isolates	
3.6.1 Morphological characterization	
3.6.2 Physical characterization	
3.6.2.1 Effect of temperature	
3.6.2.2 Effect of pH	
3.6.2.3 Effect of NaCl	
3.6.3 Biochemical characterization	
3.6.3.1 Starch hydrolysis test	
3.6.3.2 Citrate utilization test	
3.6.3.3 Methyl red test	
3.6.3.4 Voges-proskauer test	
3.6.3.5 Production of indole from tryptophan	
3.6.3.6 Urease test	
3.6.3.7 Gelatin liquefaction test	
3.6.3.8 Production of Hydrogen sulphide	
3.6.3.9 Catalase test	
3.6.3.10 Acid and gas production from carbohydrates	
3.7 Analytical methods	
3.7.1 Thin Layer Chromatography (TLC)	
3.8 Genetic analysis of the isolated strains	
3.8.1 16S r RNA sequencing	

4. RESULTS AND DISCUSSION

12

- 4.1 Collection of sample (Soil samples and biodiesel derived crude glycerol)
 - 4.1.1 Pre-treatment of crude glycerol
- 4.2 Isolation of crude glycerol utilizing microorganism
 - 4.2.1 Enrichment of soil microorganisms
 - 4.2.2 Isolation of microorganisms by serial dilution method
 - 4.2.3 Culturing on Mineral Salt Medium
- 4.3 Screening of crude glycerol utilising isolates for 1,3-PDO production
- 4.4 Morphological, Physical and Biochemical characterization of 1,3-PDO producing isolates
 - 4.4.1 Morphological Characterization
 - I. Simple staining
 - II. Gram's staining
 - 4.4.2 Physical characterization
 - 4.4.3 Biochemical characterization
 - 4.4.3.1 Starch hydrolysis test
 - 4.4.3.2 Citrate utilization test
 - 4.4.3.3 Methyl red test
 - 4.4.3.4 Voges-proskauer test
 - 4.4.3.5 Indole production test
 - 4.4.3.6 Urease test
 - 4.4.3.7 Gelatin liquefaction test
 - 4.4.3.8 Production of Hydrogen sulphide
 - 4.4.3.9 Catalase test
 - 4.4.3.10 Acid and gas production from carbohydrates
 - 4.4.4 Genetic analysis of isolated bacterial strains
 - 4.4.4.1 16s rRNA sequencing
 - 4.4.4.2 BLST analysis and Phylogenetic tree construction

5.CONCLUSION
