

INTRODUCTION

“An Education Isn't How Much You Have Committed To Memory, Or Even How Much You Know. It's Being Able To Differentiate Between What You Know And What You Don't”. This thought divert us a positive guidance towards the education. This tells us that education is most important for the survival of life & in the society now, the vital part for education is examination pattern ,in which manner the examination are taken?

During the regular college timings and in examination session, there is a chances of load shedding for automated siren or delay in ringing the siren by the authenticate person, who has the responsibility for that work. In day-to-day life, many cases are known to be hear about these problem and due to this, college commencement or closing times should be delayed and in examination question distribution or answer booklets collection are postpone or proponed by some times. Hence by happening such things society have to face many serious problems. For these Problems we can implemented the system name as **“Solar Powered Automated Siren Using GSM”**.

If problems related to exams and regular college timings are avoided using such systems, then we can say that, education is done successfully & “Education is an admirable thing, but it is well to remember from time to time that nothing that is worth knowing can be taught.”
