

INTRODUCTION

According to the national crime records bureau, the total number of rape cases in India was a staggering 228650 and Delhi, the national capital accounted for 5234 of those and in 2011

According to ministry of home affairs a total of 24193 cases were reported. This is just the tip of the iceberg. Rape is notoriously under reported crime, thanks to its social stigma. A woman is raped in every 21 minutes in India and every 18 hours in Delhi. It's shameful for the whole world.

The primary reason behind such shocking statistics is the society which is prejudiced against the girl child, lack of proper policing, ineffective laws, etc. While the long term solution should aim to correct the above factors. Now there is requirement of some changes.

By observing such bad conditions of woman in the world we are designing and developing this project.

In this project we are designing a device that can be used by woman for help in emergency situations as it can send information to family members and to near police station

.

This project has the potential to help the woman by the technologies used in it and carried all time by her and used at the time of emergency.

This device alerts neighbors, send information of her location to family member and to nearby police station.

The wireless camera fixed in the device will start sending video and audio signal to the nearest police station.

This device is also designed to generate shock waves to attack the enemy.
